Subject: San Jacinto - Dive Team Inspection
Date: Tuesday, April 12, 2016 5:27:04 PM

Anne,

Just a note to let you know that MIMC is very concerned about some preliminary results of the EPA dive team inspection that has been taking place over the last week or so at the Site. It is our understanding that the dive team has identified certain areas as areas that need further investigation. However, it appears that a number of these areas were identified even though they are outside the cap area. Other areas represent situations where a large amount of sediment (not waste) simply exists on top of the cap as a result of natural river flow conditions. It is our understanding that none of these areas have actually been confirmed to have deficient capping. This situation is currently under discussion between our technical representatives and the Superfund group at EPA. It is our hope that this matter can be further investigated and the facts determined before a public announcement is made about this matter. If you have a few moments, please give me a call so we can discuss. Thanks. Al
